

Ultracolor plus – the ultimate grout, now in a new limestone shade

Mapei's versatile, multi-purpose grout, Ultracolor Plus, is now available in an additional colour; Limestone. Already available in 26 shades, the new colour grout possesses the same high quality formula and attributes associated with Ultracolor Plus including BioBlock® anti mould and DropEffect® water resistance technologies. These assist to prevent mould and reduce surface water absorption, to provide a long lasting aesthetic finish.

The new shade has been designed to complement and enhance the final aesthetic of natural stone and agglomerate stone tiles. It is especially effective when grouting tumbled stone such as limestone as well as travertine, marble and sandstone. It is prepared and applied in the same way as the existing Ultracolor Plus range. When utilised with natural or agglomerate stone it may be necessary to pre-seal dependent on the porosity of the stone and the suppliers or manufacturers recommendations.

Suitable for both domestic and commercial applications it can be used, like the other 26 Ultracolor Plus colour grouts, with all types of ceramic and porcelain tiles internally or externally on floors or walls. The fast setting and drying grout is ideal when seeking to find the perfect colour match to the tile or to create a contrast. Ultracolor Plus can be applied to heavy duty areas, wet areas including power showers, timber substrates and under floor heating for joints between 2-20mm.

For more Mapei product information and for your local stockist please call +44 (0)121 508 6970. Technical data sheets can also be found online at www.mapei.co.uk in addition to an interactive online grout selector where each colour grout can be tested against a variety of kitchen, bathroom and tiled settings.

Notes to editors
