

Wood22

Terra Therma Wood22

Wood22 is designed to reduce the water temperature required for timber under floor heating, reducing the energy consumption of the system. This is achieved by the heat pipes sitting above the load bearing wood system.

Manufacturer: Terra Therma

Type of system: water

Material: chipboard with aluminium heat distribution plates

Panel depth:22mm

Panel size: 1800 x 600mm

Installation: dry installed and fitted together using tongue and groove system on all four sides

Floor covering above: laminates, tiles, carpet and timber can be applied above a plywood layer

Floor construction below: can be fitted on top of the existing floor deck

UK distribution location: Essex, London, Kent, and Surrey
